The starting configuration provides one SQL database per service instance residing on shared compute slices, with 2 sharable vCPUs (8 GB of memory), and 20 GB of storage for data and logs. All database deployed across multi-tenant compute infrastructure. Scale your database up to 16 vCPUs (64 GB of memory) and 4 TB of storage for data and logs. Standard offers a high availability option that includes one database running on three shared virtual servers. Each HA node is billed separately. The high availability virtual servers are provisioned across multiple availability zones in IBM Cloud regions that support it. Scale your compute and storage independently to achieve the perfect price/performance fit. Each plan includes up to 100 GB of backup storage, stored for 14 days.
